FOR IMMEDIATE RELEASE

PRESS RELEASE

**Mustimuhw entrusts Vigilance Santé
to enable an e-prescribing service into its cEMR**

Repentigny, September 9, 2020 – Vigilance Santé is pleased to announce that it is partnering with Mustimuhw Information Solutions Inc., a subsidiary of the Cowichan Tribes of British Columbia, to help deliver care to the 285 First Nations communities the company serves across Canada.

To make it possible for prescribing health providers to send prescriptions directly to pharmacies using its Community Electronic Medical Record (cEMR), Mustimuhw has made plans to integrate PrescribeIT®, Canada Health Infoway's national e-prescribing service, into the cEMR system. The company is now calling on Vigilance Santé to help carry out this project and supply the analysis and drug information module that will bridge the gap between the cEMR and PrescribeIT®.

"We're thrilled to be working with Vigilance Santé to improve our cEMR's medication management feature," says Mark Sommerfeld, CEO of Mustimuhw Information Solutions. "RxVigilance constitutes a significant advantage for clinical users of our system and their clients. Vigilance Santé's structured clinical data will allow us to send prescriptions electronically via PrescribeIT®, making it easier and safer to prescribe medications, especially when in-person visits are hard to arrange or not recommended."

RxVigilance, Vigilance Santé's flagship software, will provide key decision support tools for medication management, including access to the Non-Insured Health Benefits (NIHB) drug benefit list. The product's exceptional quality, its 100 percent Canadian content, and its patient drug profile analysis tool (complete with a user-friendly viewer feature) are also major advantages for Mustimuhw.

"Right now we're working on giving cEMR and Mustimuhw users access to as many RxVigilance tools as possible: the patient profile analysis engine, monographs, price charts, drug indications and interactions, pediatric dosages, etc.," says Andrée-Anne Chevalier, co-president of Vigilance Santé. "We're also pleased to support cutting-edge, quality health services for Indigenous communities through our partnership with Mustimuhw."

Vigilance Santé has no doubt that users will appreciate features such as the provincial drug coverage module, which includes information on coverage for First Nations people, and the patient profile analysis tool, which generates alerts related to medications and patient profile information (age, conditions, etc.).

About Vigilance Santé Inc.

Established in 1991, Vigilance Santé combines knowledge, intelligence, and technology to empower front-line health care professionals. The company develops IT solutions and databases with the aim of ensuring the safe and optimal use of medications. RxVigilance, its flagship product, already has more than 20,000 users. With monthly updates, the software can be used to look up drug information, perform comprehensive pharmacological profile analyses, access a broad range of patient handouts, and much more. Vigilance Santé's other products include RxPhotos, which hosts a database of over 35,000 photos of pills and their packaging across three services. www.vigilance.ca

About Mustimuhw Information Solutions

Mustimuhw Information Solutions Inc. (MIS) is a technology solution provider for Indigenous health, child and family services, and patient access. MIS solutions, such as the Mustimuhw Community Electronic Medical Record (cEMR) and the Mustimuhw

Child and Family Services Case Management System (CFS-BP), are the leading solutions of choice for Indigenous organizations across Canada. MIS tools are recognized for their ability to provide a balance of standardized digital health functionality as well as support the unique functional and cultural requirements of Indigenous services and approaches to wellness. MIS' electronic solutions seek to integrate community members, families, service providers, and technology in delivering care with one heart and one mind. <https://www.mustimuhw.com>
