

FIRST NATION HEALTH CENTRE SUPPORTING RECORDS (cEMR)

First Nation Health Centres have a broad range of health services and care providers. Our community partners have indicated it is inefficient and divisive to have multiple “specialist” software systems for each type of service provider. And further, that it is ineffective to try and ‘force-fit’ everyone into using a tool that might only be well suited to a small portion of the team. The Mustimuhw Community Electronic Medical Record (cEMR) is designed to address these challenges.

Core Platform for All your Health Staff

Benefiting from two decades of continuous input directly from all health staff, the Mustimuhw cEMR has powerful functionality for all of your teams. Having all your staff on the same system improves communication and information sharing across teams.

Community Health and Home Care

Comprehensive charting formats for both community health and home and community care (HCC). A robust immunization module with regionally aligned schedules. Personal Support Worker resource scheduling for HCC programs. Extensive service reports.

Mental Wellness

Mental Wellness programs and services are an important focus of the cEMR. The system supports a wide range of standardized and custom charting formats for clinical counselors to A&D and NNADAP workers. Also manages contracted external MW sessions.

Medical Transportation

The Medical Transportation module takes the complexity out of managing transportation benefits and trips. Multiple models of workflow are supported, including van management and scheduling, warrants and vouchers, and financial reconciliation.

And more...

Child & Oral Health (COHI) teams
Jordan's Principle Case Management
Traditional Practitioners

Aboriginal Addictions Treatment Centres
Health Directors and Managers
Allied Health Professionals

KEY BENEFITS

One client-centric system for all your service providers and management staff
