JORDAN'S PRINCIPLE DATA SYSTEM **SELECT: MUSTIMUHW cEMR**

Jordan's Principle teams and community staff play a key role for our families and children. It is essential that these teams have the appropriate tools to support their important work. **The Mustimuhw Community Electronic Medical Record (cEMR) system is positioned as the best tool for your Jordan's Principle Program.**

Benefiting from two decades of continuous input from First Nations health staff, the cEMR has powerful functionality for all health teams, removing the need for separate systems for each health program and improving communication and information sharing across teams. It also now includes a powerful communications hub for managing secure SMS-text messaging to clients, families, and care providers.

Privacy & Security, Data Governance, OCAP

Mustimuhw takes the privacy and security of your data very seriously. The Mustimuhw cEMR is the only Jordan's Principle software that has passed national certification for health information privacy and security. The cEMR is OCAP-aligned and supports Nation-based Data Governance, meaning YOU own your own data, and YOU get to decide who has access to it.

Jordan's Principle Workflow

Designed to support the Coordinated Care Model established by the *Manitoba Jordan's Principle Service Coordinators Collaborative*, the cEMR fully enables key program workflows to support quality case management, service delivery and advocacy for children and families. *See Key Features & Functions below.*

Cost

The cost of the annual license for the cEMR is based on the number of staff using the cEMR. The estimated licensing cost for a Jordan's Principle team is \$6,000 - \$12,000. Included in this annual fee are the supporting services of: implementation services, ongoing training, upgrades, customizing the cEMR for your organization, help desk support, and privacy & security services.

KEY BENEFITS

Nation-Based Data Ownership

Can also be used by other programs and teams in your organization

Role-based security access controls to manage appropriate access and data sharing by users and teams

User and team based task management and follow-up functionality

Electronic referral and wait-list tracking
